Allowable Subject Matter

1. Claims 1-39 are allowed.

The following is an examiner's statement for reasons for allowance.

2. Claims 1, 17, and 30 are allowable over the prior art of record since the cited references taken individually or in combination fail to particularly teach or fairly suggest off-loading short message service (SMS) messages from a core mobile signaling network by receiving, on an A-interface signaling link, a first signaling message from a base station controller (BSC), determining whether the first signaling message includes a short message relay protocol (SM-RP) component, generating a second signaling message in response to determining that the first signaling message contains an SM-RP component, and routing the second message towards a destination via an off-load network. It is noted that the closest prior art of record, Zaffino (US 6888823) shows utilizing a packet-switched network to support services provisioned to mobile station subscribers. However, Zaffino fails to suggest receiving a first signaling message including a SM-RP and routing the second message, in response to the first signaling message, towards a destination via an off-load network.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
 - US Patent (6856808) to Comer et al

- US Patent (6888823) to Zaffino
